1. Applicant cancelled claims 2 and 6.

DETAILED ACTION

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 8 is rejected under 35 USC § 101 because they are directed to non-statutory subject matter.

The descriptions or expressions of the programs are not physical "things." They are neither computer components nor statutory processes, as they are not "acts." Being performed. Such claimed computer programs do not define any structural and functional interrelationships between the computer program and other claimed elements of a computer, which permit the computer program's functionality to be realized. In contrast, a claimed computer-readable medium encoded with a computer program is a computer element which defines structural and functional interrelationships between the computer program and the rest of the computer which permit the computer program's functionality to be realized, and is thus statutory. Accordingly, it is important to distinguish claims that define descriptive material per se from claims that define statutory inventions.

Allowable Subject Matter

3. Claims 1, 3-5, 7 and 9 are allowed.

Application/Control Number:

10/567,996

Art Unit: 2857

The following is a statement of reasons for the indication of allowable subject matter:

Claim 1 is allowed because the closest prior art, Sugimoto et al. (U.S. Patent No. 4,649,743) fails to anticipate or render obvious an acoustic vibration analyzing apparatus capable of carrying out analysis of acoustic vibrations by picking up data of sounds or vibrations generated due to rotation of a plurality of rotating bodies and data of a number of revolutions of a rotating body selected from the plurality of rotating bodies when a power transmission mechanism of a vehicle having the plurality of rotating bodies operates, said acoustic vibration analyzing apparatus comprising means for reproducing sounds having a specified order selected based on display of the displaying means, in combination with the rest of the claim limitations as claimed and defined by the Applicant.

Claim 5 is allowed because the closest prior art, Sugimoto et al. (U.S. Patent No. 4,649,743) fails to anticipate or render obvious a method of analyzing acoustic vibrations by picking up data of sounds or vibrations that are generated due to rotation of a plurality of rotating bodies and data of the number of revolutions of a rotating body selected from the plurality of rotating bodies when a power transmission mechanism of a vehicle having the plurality of rotating bodies operates, said method including a step of reproducing sounds when reproduction of sound having a specified order are selected based on display of made in the displaying step, in combination with the rest of the claim limitations as claimed and defined by the Applicant.

Application/Control Number:

10/567,996

Art Unit: 2857

Claim 9 is allowed because the closest prior art, Sugimoto et al. (U.S. Patent No. 4,649,743) fails to anticipate or render obvious a recording medium readable by a computer, by which acoustic vibration analysis is carried out by causing data of sounds or vibrations generated due to rotation of a plurality of rotating bodies and data of a number of revolutions of a rotating body selected from the plurality of rotating bodies picked up by a computer when a power transmission mechanism of a vehicle having the plurality of rotating bodies operates, wherein said recording medium stores a program including a step of reproducing sounds when reproduction of sound having a specified order are selected based on display of made in the displaying step, in combination with the rest of the claim limitations as claimed and defined by the Applicant.

Response to Arguments

4. Applicant's arguments with respect to claims 1, 3-5 and 7-9 have been considered but are moot in view of the new ground(s) of rejection.

Contact information

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mohamed Charioui whose telephone number is (571) 272-2213. The examiner can normally be reached Monday through Friday, from 9 am to 6 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eliseo Ramos-Feliciano can be reached on (571) 272-7925. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
